

## Appendix 2 Plan of monitoring measures

This Appendix to the Environmental Management Plan (EMP) for the works Contract *3A.3 Section 4 - Right embankment of the Vistula from Skawinka estuary to the Kościuszko barrage* - specifies the terms and conditions for the implementation of the Contract in terms of monitoring actions. The costs and the schedule of implementation of these actions should be included in the tender offer.

Definitions of the table in Appendix 2 of the EMP:

1. The actions enlisted to in the table of Appendix 2 of the EMP refer to the monitoring of the implementation of mitigation measures as referred to in Appendix 1 thereto (quoted there literally in the *Monitoring Subject* column);
2. Unless otherwise stated, the definition **Contract Area** refers to the area of performance of any preparatory works, main works (including Permanent and Temporary Works) and any other works related to removal of faults and defects or completion of unfinished works enlisted in the Take-over Certificate or reported in the Defects Liability Period, Guarantee and Warranty together with the area of necessary temporary occupancy;
3. Unless otherwise stated, the definition **Contract Implementation Period** refers to the period of performing any preparatory works, main works (including Permanent and Temporary Works) and any other works related to removal of faults and defects or completion of unfinished works enlisted in the Take-over Certificate or reported in the Defects Liability Period, Guarantee and Warranty;
4. Unless otherwise stated, the definition **Contractor's Team** in the column *the Party in charge* refers personally to the EMP Coordinator in the Contractor's Team (referred to in item 91 Appendix1 of the EMP), co-operating with the Site Manager and the remaining part of the Contractor's Team (including the environmental experts team and archaeological experts team);
5. Unless otherwise stated, the definition **Engineer's Team** in the column *the Party in charge* refers personally to the Environmental Management Expert in the Contract Engineer's Team, co-operating with the relevant Supervision Inspectors and the remaining part of the Engineer's Team.

<b>A. REQUIREMENTS ON SCHEDULE OF WORKS</b>							
1		Schedule of works	<p><b>EMP conditions on the schedule of works</b></p> <p>When setting work schedules and at the stage of their implementation, the EMP conditions regarding the dates and time of conducting various types of work should be taken into account, described in detail in the consecutive items of the table, including, but not limited to:</p> <ul style="list-style-type: none"> <li>a) acceptable hours of works (see item 65);</li> <li>b) acceptable dates for removing (felling) trees and shrubs (see items 27 and 28);</li> <li>c) dates of environmental inspection before removal (felling) of trees (see item 28);</li> <li>d) the optimal date for conducting works within the root volumes of trees and shrubs (see item 32);</li> <li>e) dates of inspections related to ensuring the protection of small animals on the site (see items 37 and 38);</li> <li>f) agreeing deadlines for carrying out land reclamation works (see item 47);</li> <li>g) deadlines for reporting the implementation of the EMP (see item 96).</li> </ul>	The Contract area	The Contractor's Team/Site Manager	Prior to commencement of the Contract implementation period and during Contract implementation (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Review of work schedules.  Ongoing control of compliance with the EMP terms quoted in item 1 of Appendix 1 thereto (as specified in the descriptions for these items in this table).
					The Engineer's Team	Prior to commencement of the Contract implementation period and during Contract implementation (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Ongoing monitoring of compliance with the EMP terms quoted in item 1 of Appendix 1 thereto (as specified in the descriptions for these items in this table).  Review of the documentation submitted by the Contractor to the Engineer.
2		Schedule of works	<p><b>EMP conditions on activities to be carried out before or at the initial stage of works</b></p> <p>When setting work schedules and at the stage of their implementation, the EMP conditions should be taken into account regarding activities to be carried out before or at the initial stage of works, described in detail in the following items of the table, including, but not limited to:</p> <ul style="list-style-type: none"> <li>a) conditions for building and equipping the construction site facilities, service roads and sites (see items 13, 14, 15, , 37, 51, 54, 55, 56, 57, 58, 59, 60, 61, 62, 71, 72, 75, 76, 77, 82, 83).</li> <li>b) conditions for the road access to the construction site (see item 3, 4, 5, 6, 7, 8, 9, 10, 11, 12);</li> <li>c) the condition for removing and securing the topsoil/mineral soil (see item 21, 22, 23, 24, 25, 26);</li> <li>d) the condition for securing trees and shrubs unintended for removal (felling) (see item 29);</li> <li>e) conditions for the implementation of environmental inventories (see item 35);</li> <li>f) the condition for securing the building site against the entry of small animals (see item 37);</li> <li>g) the condition for obtaining decisions authorizing exceptions to the principles of species protection of plants, fungi and animals (see item 44, 45);</li> <li>h) conditions for the development of selected documents (see items 20, 44, 74, 79, 84, 88, 92, 93, 94, 96);</li> <li>i) conditions for documentation of technical condition of buildings and infrastructure facilities (see item 8, 81);</li> <li>j) the condition for explosive ordnance survey of the site (see item 80);</li> <li>k) the condition for inventory of illegal landfills and waste disposal (see item 78);</li> <li>l) the condition for compliance with the opinion of the heritage conservator (see item 87);</li> <li>m) the condition for obtaining the Engineer's approval for the appointed person to be EMP co-ordinator and the composition of the team of environmental experts, the team of archaeological experts and the team of sappers(see items 91, 92, 93, 94).</li> <li>n) the condition for training on the guidelines of the EMP implementation (see item 90).</li> </ul>	The Contract area with access roads and their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Review of work schedules.  Ongoing control of compliance with the EMP terms quoted in item 2 of Appendix 1 thereto (as specified in the descriptions for these items in this table).
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Review of the documentation submitted by the Contractor to the Engineer.  Ongoing monitoring of compliance with the EMP terms quoted in item 2 of Appendix 1 thereto (as specified in the descriptions for these items in this table).

<b>B. REQUIREMENTS ON ROAD ACCESS TO THE CONTRACT AREA</b>							
3	1.1.2.e 1.1.2.b	Earth surface protection	<p><b>Conditions for using access roads to the Contract area</b></p> <p>The following conditions apply to the use of access roads to the Contract area:</p> <p>a) access to the <i>Contract area</i> should be based on existing roads;</p> <p>b) the Contractor shall ensure proper marking of all access roads to the <i>Contract area</i>, in accordance with applicable law and arrangements with relevant Road Managers. These markings will be regularly inspected, and in the event of their destruction or theft, the Contractor will immediately take action to restore or complement them;</p> <p>c) The aforementioned requirements shall be observed by the Contractor also in case of organizing the water transportation.</p>	Access roads and water routes to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	<p>Visual monitoring, photographic documentation.</p> <p>Control of the progress of works on the subject arrangements and their compliance with the requirements of the EMP.</p> <p>Review of the Contractor's documentation on the traffic management and service of the Contract area.</p>
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	<p>Visual monitoring, photographic documentation.</p> <p>Review of the documentation submitted by the Contractor to the Engineer.</p>
4		Health and safety protection, Protection of tangible properties	<p><b>Conditions for using access roads to the Contract area</b></p> <p>The Contractor shall ensure protection of people against increased traffic volume on roads used during construction works. During the contract period, the Contractor will provide, install and operate all temporary safety devices (e.g. traffic lights, information boards, safety barriers), thus ensuring the safety of vehicles and pedestrians.</p> <p>The Contractor shall apply and observe any regulations and rules of in-land navigation in case of using water transportation for the works.</p>	Access roads and water routes to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	<p>Visual monitoring, photographic documentation.</p> <p>Review of the Contractor's documentation on the traffic management and service of the Contract area.</p>
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	<p>Visual monitoring, photographic documentation.</p> <p>Review of the documentation submitted by the Contractor to the Engineer.</p>
5		Earth surface protection	<p><b>Conditions for using access roads to the Contract area</b></p> <p>Compacted surfaces used by the cars transporting building materials and aggregate should be kept in a proper technical condition (including technological roads and access roads);</p>	Access roads to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	<p>Visual monitoring, photographic documentation.</p> <p>Review of the Contractor's documentation on the traffic management and service of the Contract area.</p>
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	<p>Visual monitoring, photographic documentation.</p> <p>Review of the documentation submitted by the Contractor to the Engineer.</p>
6		Health and safety protection, Protection of tangible properties, earth surface protection	<p><b>Conditions for using access roads to the Contract area</b></p> <p>The Contractor shall comply with the statutory load limits on the axle when transporting materials and equipment to and from the <i>Contract area</i>. The Contractor shall obtain all necessary permits for the transport of non-standard loads and shall notify the Engineer of any such transport on a continuous basis;</p>	Access roads and water routes to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	<p>Visual monitoring, photographic documentation.</p> <p>Control of the progress of works on the subject arrangements and their compliance with the requirements of the EMP.</p> <p>Review of the Contractor's documentation on the traffic management and service of the Contract area.</p>

No.	Item in Environ. Decision	Issue	Mitigation Measure	Place of monitoring	Entity responsible	Timing and frequency of monitoring	Manner of monitoring activities
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.
7		Health and safety protection, Protection of tangible properties, earth surface protection	<p><b>Conditions for using access roads to the Contract area</b></p> <p>The Contractor will be liable for any damage to civil structures and buildings, roads, drainage ditches, culverts, water and gas pipelines, power poles and lines, cables, geodetic control points and installations of any kind, and other types of objects such as vertical and horizontal markings, navigation markings, information boards, cultural heritage structure, etc., caused by him or his subcontractors, service providers and suppliers during the implementation of the Contract. The Contractor is also responsible for restoring the flow of ditches and drainage systems in the area of works and used transport roads, in the event of damages caused by the performance of works and transport connected with the works.</p> <p>the Contractor shall immediately repair any damage at their own expense and, if necessary, carry out other work ordered by the Engineer;</p>	Access roads and water routes to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation. Review of the Contractor's documentation on the traffic management and service of the Contract area.
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.
8		Earth surface protection	<p><b>Conditions for using access roads to the Contract area</b></p> <p>a) the Contractor is obliged to provide photographic documentation of the entire Contract area and access roads, with particular reference to the technical condition of roads and buildings located in the vicinity of the roads for transporting building materials. The completed documentation should be described with the place and the date of development thereof;</p> <p>b) prior to the commencement of works, the Contractor shall carry out site inspections in the presence of Road Managers, subsequently to which the protocols of the condition of access roads to the <i>Contract area</i> shall be developed. Based on the protocols, the Contractor will be obliged to restore the technical condition of the roads;</p>	Access roads to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation. Review of the Contractor's documentation on the traffic management and service of the Contract area.
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.
9		Health and safety protection, Protection of tangible properties, earth surface protection	<p><b>Conditions for using access roads to the Contract area</b></p> <p>a) the Contractor is obliged to agree with Administrators of roads and of the navigation route the traffic management plan and security of the works. The Contractor is obliged to carry out the traffic management according to agreed designs (marking and securing of the <i>Contract area</i>, marking of detours and recommended marking of roads, related to the change in traffic management etc.);</p> <p>b) prior to the commencement of works, the Contractor shall submit to the Engineer for approval the traffic management plan and security of works as agreed upon with Road Managers as well as the traffic management schedule. Depending on the needs and progress of works, traffic management plans should be updated by the Contractor on a regular basis;</p>	Access roads and water routes to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation. Control of the progress of works on the subject arrangements and their compliance with the requirements of the EMP. Review of the Contractor's documentation on the traffic management and service of the Contract area.
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.
10		Health and safety protection, Protection of tangible properties, earth surface	<p><b>Conditions for using access roads to the Contract area</b></p> <p>The Contractor is obliged to provide access routes for ambulances and fire brigades throughout the whole period of works, to designate roads, exits and pedestrian crossings and parking spaces for vehicles used on site.</p>	Access roads to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation. Review of the Contractor's documentation on the traffic management and service of the Contract area.

No.	Item in Environ. Decision	Issue	Mitigation Measure	Place of monitoring	Entity responsible	Timing and frequency of monitoring	Manner of monitoring activities
		protection			The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.
11		Protection of tangible properties, earth surface protection, water protection, Protection of animate nature	<b>Additional conditions regarding access roads to the Contract area</b> Delivery of materials and traffic of vehicles, machines and equipment servicing the construction site should be carried out on existing public, forest or dirt roads, while applying the navigation route, in the first place.	Access roads and water routes to the Contract area with their neighbourhood	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation. Review of the Contractor's documentation on the traffic management and service of the Contract area.
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.
12		Protection of tangible properties, earth surface protection, water protection, Protection of animate nature	<b>Setting out new access roads to the Contract implementation area</b> When necessary to make an additional access road to the <i>Contract area</i> , it should be outlined as the shortest possible section, outside the areas of high natural value. Planned locations of access roads should be agreed with the team of environmental experts (including, among others, a phytosociologist) and submitted along with the abovementioned agreements, for the approval by the Engineer. The aforementioned establishments are also related to potential new reloading sites associated with application of water transportation for deliveries of soil.	Access roads and water routes to the Contract area with their neighbourhood	The Contractor's Team/Site Manager/The Environmental Team-phytosociologist	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation. Review of the Contractor's documentation on the traffic management and service of the Contract area. Control of the participation of and arrangements made by required experts.
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Control of the participation of required experts. Review of the documentation submitted by the Contractor to the Engineer.
<b>C. REQUIREMENTS ON LOCATIONS OF SITE FACILITIES AND SERVICE ROADS AND YARDS</b>							
13	I.1.2.a I.1.2.f	Water and soil protection, Protection of animate nature	<b>Obligation to build site facilities, service roads and yards</b> Construction site facilities, service roads and yards must be completed prior to commencement of construction works. Construction site facilities are used to store building materials, garaging, refuelling and repairing vehicles, machines and equipment, and to provide location of social facilities (locker rooms, office, workshop, portable sanitary cabins) and waste containers. Equipment for site facilities should meet, among others, conditions provided for in items 37, 51, 54, 55, 56, 57, 58, 59, 60, 61, 62, 71, 72, 75, 76, 77, 82, 83. When planning the abovementioned facilities of the construction site their space should be limited to the necessary minimum.	The Contract area	The Contractor's Team/Site Manager	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Review of the Contractor's documentation on site facilities management. Visual monitoring, photographic documentation.
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.

No.	Item in Environ. Decision	Issue	Mitigation Measure	Place of monitoring	Entity responsible	Timing and frequency of monitoring	Manner of monitoring activities
14	I.1.2.f	Earth surface protection, habitat protection, protection of the soil and water environment, Acoustic climate protection	<p><b>Conditions for the location of construction site facilities, yards, storage/disposal sites, etc.</b></p> <p>Materials storage place, social facilities and parking space for machines and equipment should be located:</p> <ul style="list-style-type: none"> <li>a) in the areas with the lowest natural values, taking into account the principle of minimizing land take and transformation of its area and the obligation of land reclamation after completion of works,</li> <li>b) outside the immediate vicinity of flood waters of the river and outside the areas where water may be contaminated,</li> <li>c) outside the embanked area,</li> <li>d) at a distance of not less than 100 m from existing watercourses, water reservoirs and wetlands;</li> <li>e) in the areas ensuring no impact of noise on acoustically protected areas</li> </ul> <p>The locations intended for site facilities and the abovementioned components of the construction site should be agreed with a team of environmental experts (including a phytosociologist and zoologists) and presented for the Engineer's approval together with expert agreements.</p>	The Contract area	The Contractor's Team/Site Manager/The Environmental Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	<p>Review of the Contractor's documentation on site facilities management.</p> <p>Visual monitoring, photographic documentation.</p> <p>Control of the participation of and arrangements made by required experts.</p>
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	<p>Visual monitoring, photographic documentation.</p> <p>Review of the documentation submitted by the Contractor to the Engineer.</p> <p>Control of the participation of required experts.</p>
15	I.1.2.f	Protection of animate nature, water protection, earth surface protection	<p><b>Conditions for the location of service roads</b></p> <p>Service roads should be located:</p> <ul style="list-style-type: none"> <li>a) outside the areas with the highest natural values; if the condition cannot be met in a given location, service roads should be located in the immediate vicinity of works, taking up minimum necessary space of the areas;</li> <li>b) at the maximum possible distance from existing watercourses, water reservoirs and wetlands;</li> <li>c) in the first place on existing roads, including existing roads linear to and on flood banks;</li> </ul> <p>The locations intended for service roads should be agreed with a team of environmental experts (including a phytosociologist) and presented for the Engineer's approval together with expert agreements</p>	The Contract area	The Contractor's Team/Site Manager/The Environmental Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	<p>Review of the Contractor's documentation on site facilities management.</p> <p>Visual monitoring, photographic documentation.</p> <p>Control of the participation of and arrangements made by required experts.</p>
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	<p>Visual monitoring, photographic documentation.</p> <p>Review of the documentation submitted by the Contractor to the Engineer.</p> <p>Control of the participation of required experts.</p>
16	I.1.2.a	Earth surface protection, Water and soil protection	<p><b>Economical use of the site and limitation of works on the embanked area</b></p> <p>In the whole Contract area, economical use of the site should be ensured as well as a minimum transformation of its area.</p> <p>All works related to the implementation of the Contract should be carried out to the maximum extent possible outside the areas of the existing embanked area.</p>	The Contract area	The Contractor's Team/Site Manager	During the Contract implementation period - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation.
					The Engineer's Team	During the Contract implementation period - on an ongoing basis, not less than once per month	<p>Visual monitoring, photographic documentation.</p> <p>Review of the documentation submitted by the Contractor to the Engineer.</p>
17		Earth surface protection, water and soil protection	<p><b>Economical use of the site - materials storage place</b></p> <p>When outlining storage spaces, their number and area should be limited to the extent necessary for the current works or activities.</p> <p>In the case the areas intended for storage of materials become empty, such areas should be reused as far as possible for further storage of materials.</p>	The Contract area	The Contractor's Team/Site Manager	During the Contract implementation period - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation.
					The Engineer's Team	During the Contract implementation period - on an ongoing basis, not less than once per month	<p>Visual monitoring, photographic documentation.</p> <p>Review of the documentation submitted by the Contractor to the Engineer.</p>

No.	Item in Environ. Decision	Issue	Mitigation Measure	Place of monitoring	Entity responsible	Timing and frequency of monitoring	Manner of monitoring activities
18		Land acquisition for permanent occupancy	<b>Buy-outs and compensation</b> Buy-outs and compensation as well as assistance for individuals affected by the Contract (pursuant to Land Acquisition and Resettlement Action Plan).	The Contract area	PIO/Contractor's Team /Engineer	During the Contract implementation period (inter alia prior to commencement of works - until the condition is met - on an ongoing basis, not less than once per month	Review of the Contractor's documentation on buy-outs and compensation.
					The Engineer's Team	During the Contract implementation period (inter alia prior to commencement of works - until the condition is met - on an ongoing basis, not less than once per month	Review of the documentation submitted by the Contractor to the Engineer.
19		Land acquisition for temporary occupancy	<b>Payment of compensation</b> Payment of compensation by the Contractor for temporary occupancy prior to commencement of works (in accordance with the Land Acquisition and Resettlement Action Plan).	The Contract area	PIO/Contractor's Team /Engineer	During the Contract implementation period (inter alia prior to commencement of works - until the condition is met - on an ongoing basis, not less than once per month	Review of the Contractor's documentation on buy-outs and compensation.
					The Engineer's Team	During the Contract implementation period (inter alia prior to commencement of works - until the condition is met - on an ongoing basis, not less than once per month	Review of the documentation submitted by the Contractor to the Engineer.
<b>D. REQUIREMENTS ON THE QUALITY AND MANAGEMENT OF SOILS</b>							
20		Water and soil protection	<b>Management of the soils from within the construction site</b> Soils located on the construction site (including earth masses) should first be used on the construction site. The remaining excess of soil should be managed in accordance with the design documentation. The procedure for dealing with soil constituting waste should be presented in the Waste Management Plan prepared by the Contractor and submitted to the Engineer for approval prior to the commencement of works (in accordance with item 74 –preparation of a Waste Management Plan (PGO).	The Contract area	The Contractor's Team/Site Manager	During the Contract implementation period - on an ongoing basis, not less than once per week	Visual monitoring, photographic documentation. Assessment of progress of work on this document and its compliance with the EMP requirements.
					The Engineer's Team	During the Contract implementation period - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer.
<b>E. REQUIREMENTS ON PROCEEDING WITH TOPSOIL/MINERAL SOIL</b>							
21	I.1.2.r I.1.2.n	Soil protection, Protection of animate nature	<b>Collecting the top layer of soil</b> In order to protect the layer of topsoil from the Contract area: a) prior to the commencement of earthworks on a given area, it should be inspected for the presence of protected species; b) prior to the commencement of construction works in individual parts of the Contract area, a layer of fertile soil (i.e. topsoil) should be removed, with a thickness of not less than 0.1 m (this condition applies to all locations in the Contract area where the existing topsoil layer could be degraded in relation to conducting works, driving and operating vehicles, machinery and equipment, storing materials, etc.); c) Earthworks should be carried out under the supervision of a naturalist.	The Contract area	The Contractor's Team/Site Manager/The Environmental Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per week	Review of the documentation on the site facilities management and proceeding with the topsoil layer. Visual monitoring, photographic documentation. Control of the participation of and arrangements made by required experts.
					The Engineer's Team	During the Contract implementation period (including, inter alia, prior to commencement of works and during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer. Control of the participation of required experts.

No.	Item in Environ. Decision	Issue	Mitigation Measure	Place of monitoring	Entity responsible	Timing and frequency of monitoring	Manner of monitoring activities
22	I.1.2.r	Soil protection, Protection of animate nature	<p><b>Storing of topsoil</b></p> <p>The removed layer of top-soil shall be stored in the following way:</p> <ul style="list-style-type: none"> <li>a) removed topsoil shall be stored beyond the area of earthworks in piles; beyond the area of earthworks in a way allowing for its reuse</li> <li>b) the precise location of topsoil piles should be pre-arranged with a team of environmental experts (including phytosociologist and zoologist), so that topsoil storing does not degrade natural habitats and protected species, nor does it adversely affect the condition of trees and shrubs;</li> <li>c) storage piles of topsoil should be secured against: contamination, being driven over by vehicles, compaction, storage of building materials, etc.;</li> <li>d) storage piles of topsoil, until they are reused for final shaping of the embankment and adjacent areas, shall be kept in adequate humidity, in a manner allowing for its reuse – they should be systematically sprinkled, with a frequency depending on the weather.</li> </ul>	The Contract area	The Contractor's Team/Site Manager/The Environmental Team	During the Contract implementation period (including, inter alia during performance of works) - on an ongoing basis, not less than once per week	Review of the documentation on the site facilities management and proceeding with the topsoil layer. Visual monitoring, photographic documentation. Control of the participation of and arrangements made by required experts.
					The Engineer's Team	During the Contract implementation period (including, inter alia during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer. Control of the participation of required experts.
23	I.1.2.r	Soil protection, Protection of animate nature	<p><b>Use of topsoil</b></p> <p>Upon the completion of construction works the topsoil should be used to restore the fertile soil layer at later construction phase.</p>	The Contract area	The Contractor's Team/Site Manager/The Environmental Team	During the Contract implementation period (including, inter alia during performance of works) - on an ongoing basis, not less than once per week	Review of the documentation on the site facilities management and proceeding with the topsoil layer. Visual monitoring, photographic documentation. Control of the participation of and arrangements made by required experts.
					The Engineer's Team	During the Contract implementation period (including, inter alia during performance of works) - on an ongoing basis, not less than once per month	Visual monitoring, photographic documentation. Review of the documentation submitted by the Contractor to the Engineer. Control of the participation of required experts.
